# Congressional Districts of the 98th Congress

(Congressional districts are numbered and outlined in heavy lines; light outlines are county boundaries)

## Congressional District Profiles, 98th Congress

#### INTRODUCTION

This report supplements 1980 Census of Population and Housing series PHC80-4, Congressional Districts of the 98th Congress. It serves as a national summary for that series, and all but the election data have been derived from the individual State reports in PHC80-4. Beyond this, however, this report is meant to provide a brief and convenient profile of the character of each Congressional district and a convenient means of comparing the character of one Congressional district with another.

The data shown here generally are based on population and housing unit figures contained in PHC80-4 and are presented as percentages for easier comprehension and comparison. few key statistics are published as whole numbers. For greater detail on any given topic, the PHC80-4 reports should be consulted. These reports also contain appendixes describing in detail the definitions and explanations of subject characteristics together with information regarding the taking of the 1980 Census of Population and Housing and accuracy of the data.

Four detailed tables are included. Table 1 contains complete-count population data, including population totals and change since 1970, percent deviation of each district's population from the State average population, metropolitan and urban residence, race and Spanish origin, and selected age detail. Considerable emphasis is placed on the population of voting age. Detail on votes cast is extracted from the report of the Clerk of the House of Representatives, Statistics of the Congressional Election, November 2, 1982.

Tables 2 and 3 present sample estimates from the 1980 census. Table 2 focuses on residence (rural farm, where born, where living 5 years ago), school enrollment, families, income, and poverty.

Table 3 covers labor force, employment, and veteran status. Table 4 includes complete-count data on housing units and households, focusing on indicators of problem housing, and sample estimates on year structure built and house heating fuel. For information on sampling variability in the estimates see appendix D of any PHC80-4 report.

All tables include a national summary line which permits comparisons of any Congressional district or State value with the United States average. Data are also included for the District of Columbia.

Figure 1 presents Congressional district boundaries for the 98th Congress superimposed on a county outline map. In the 6 States with Congressmen at Large, all county outlines have been removed. The appendix shows rankings of the highest or lowest Congressional districts according to various characteristics contained in the 4 detailed tables.

# REAPPORTIONMENT BASED ON 1980 CENSUS

The 98th Congress is the first in which reapportionment based on the 1980 census takes effect. Some 17 seats shifted as a result of reapportionment. Eleven states gained Representatives (Arizona 1, California 2, Colorado 1, Florida 4, Nevada 1, New Mexico 1, Oregon 1, Tennessee 1, Texas 3, Utah 1, and Washington 1), and 10 States lost Representatives (Illinois 2, Indiana 1, Massachusetts 1, Michigan 1, Missouri 1, New Jersey 1, New York 5, Ohio 2, Pennsylvania 2, and South Dakota 1).

As a result of legislative or judicial action, Congressional district boundaries were revised in 42 States for the 98th Congress. New Congressional district boundaries based on the 1980 census counts have been specified in all multidistrict States except Maine and Montana.

Six States elect a Representative at Large.

In 37 States the population of each district varies by less than 1 percent from the average congressional district population for the State, and in 5 additional States the largest difference is between 1 and 2 percent (table 1). Only the unredistricted States of Maine and Montana had differences in excess of 3 percent. Of the 429 Congressional districts in multi-district States, 18 vary from the State average district population by 1 percent or more, and 4 of these differ by more than 3 percent (appendix table 1).

The close population conformity mentioned above reflects the effect of one-man one-vote reform instituted by the courts beginning in the middle 1960's. Table A summarizes the distribution of districts by their variation from the State average for the 98th Congress and compares it with the 93rd and 88th Congresses, which first reflected redistricting based on the 1970 and 1960 censuses, respectively.

Table A Percent Deviation of Congressional Districts From the State Average Congressional District Population: 98th, 93d, and 88th Congress

Percent deviation	98th Con- gress	93rd Con- gress	88th Con- gress
Total number of Congressional districts <sup>1</sup> . Less than 1 percent 1 to 5 percent 5 to 10 percent 10 percent and over	429 411 18 -	429 385 41 3	413 9 81 87 236
Average percent deviation.	0.2	0.4	17.0

 $^{1}$ In addition, in the 88th Congress there were 22 members elected at large, compared with 6 in the 93rd and 98th Congresses.

The remarkable degree to which population comformity has been achieved for the districts of the current Congress is further illustrated by the fact that in four States (Colorado, Hawaii,

Michigan, and Minnesota) no district deviates from the State average by as much as one-tenth of one percent. The State of Michigan drew its Congressional district lines so that 16 of its 18 districts had identical 1980 populations and the other 2 districts differed by only 1 person.

Despite the near equality of population achieved by the Congressional districts in virtually all States, there may still be a number of State redistrictings for the 99th Congress. In addition to Maine and Montana, which will redistrict for the first time based on the 1980 census, several States are being required to rework their district lines. Texas and Washington redistrictings for the 99th Congress have already been accomplished, and other States are expected to take action over the next year.

# POPULATION SIZE AND PERCENT CHANGE

Table 1 shows the population of each Congressional district in 1980 and the percent change in population since the 1970 census. The average population of a Congressional district in 1980 was 519,328 (excluding the District of Columbia).

Population size of Congressional districts varied from State to State. States that just missed qualifying for an extra Congressional seat tended to have the largest average population per district, and those that just qualified for an extra seat had the smallest averages. This was particularly true of the cutoff between 1 and 2 seats. South Dakota, which lost its second seat on the basis of the apportionment of the House of Representatives in 1980, had the largest population represented by one Congressman (690,768 in 1980), and Montana, which was the smallest State to qualify for 2 seats, had the smallest: District 2 with 376,619 population. Within each State, population differences from district to district were minimal, and all but 78 Congressmen (18 percent) represented populations within 5 percent of the size of the national average. The 10 largest and 10 smallest districts are listed in table B. (See also appendix table 1.)

Table B. Population of the 10 Largest and Smallest Congressional Districts: 1980

Rank		Large	st		Smallest			
	Dis	trict	•	ula- tion	Dist	rict	•	ula- tion

-(AL) at large.

During the 1970's the population of the United States increased by 11.4 Many Congressional districts had population growth several times faster than the national rate, with three districts more than doubling in population and 25 increasing by 50 percent or more during the decade (table C). Fastest growing was District 14 of Florida (126.3 percent), which includes most of the West Palm Beach area plus the northwestern suburbs of Fort Lauderdale. Also growing by more than 100 percent were District 7 of Texas (part of Houston and its suburbs in the northwestern part of Harris County) and District 43 of California (northern suburbs of San Diego and southern Orange County). Five of the 10 largest increases were in Florida districts and 3 in Texas districts. Of the 25 districts growing by 50 percent or more, 7 were in Florida, 6 in Texas, and the remaining 12 in the West (Arizona, California, Colorado, Nevada, and Utah).

Table C. Congressional Districts Increasing in Population by 50 Percent or More: 1970 to 1980

#### RESIDENCE STATISTICS

In addition to the total population in each Congressional district and its percent change since 1970, tables 1 and 2 show detail on place of residence in 1980. Table 1 shows what percent of the population is metropolitan (inside metropolitan statistical areas, or MSA's, as defined by the Office of Management and Budget effective June 30, 1983). Also shown is the percent of the population which is urban-those people living in urbanized areas, the densely settled areas around large cities, as well as in other places of 2,500 or more. Population not defined as urban is rural. and the complement of the percent urban is the percent living in rural areas. The rural farm population percentage (that share of the total population living on farms) is presented in table 2.

Although the concepts metropolitan and urban are sometimes used interchangeably, they should not be. Most, but not all, of the population in SMSA's is urban (some is rural), but there are also many urban places outside SMSA's. SMSA's are defined in terms of large cities and the surrounding counties which are socially and economically integrated closely with them. Commuting is used to measure the degree of integration. In New England the building blocks are cities and towns instead of counties. Those people not living in SMSA's are nonmetropolitan.

With the population of the United States about 76 percent metropolitan and also 74 percent urban, it is not surprising that many Congressional districts are completely metropolitan and/or urban. In fact 182 districts fall entirely within MSA's-almost 42 percent of all Congressional districts. In California 35 of 45, and in New York 25 of 34 districts are completely metropolitan. New Jersey is the only State where all Congressional districts are entirely in MSA's. By contrast 6 Congressional districts have none of their population in MSA's-District 1 of Kansas, District 11 of Michigan, District 1 of Montana, District 3 of Nebraska, District 3 of New Mexico, and District 1 of North Carolina-and 14 districts have less than 10 percent (appendix table 2).

In comparison there were only 67 Congressional districts completely urban in 1980. California had 15, all but one in

the Los Angeles-San Diego corridor, and New York had 16, all in the New York City area. Nearly 150 districts were at least 90 percent urban.

The 5th District of Kentucky had the highest proportion of rural population in 1980 (81.1 percent). Nineteen districts contained 65 percent or more rural population, most of them in the South, especially in Appalachia (appendix table 2). The U.S. average was about 26 percent.

The population living on farms has been dwindling throughout the century. Nationally only 2.5 percent of the population was rural farm in 1980. Eighteen Congressional districts in the Midwest, two in Kentucky, and one in Montana, however, have 10 percent or more of their population living on farms. The highest percentage is 23.9 for District 2 of Minnesota (appendix table 2).

Table 2 focuses on people who have changed their residence over time. Most of the persons living in the United States in 1980 were born in their State of residence (63.9 percent), and a small share (6.2 percent) were foreign born. The remainder were born in another State or born abroad to American parents. The change in residence over the 1975-1980 period is similarly measured for the population 5 and over (those alive in April 1975), with the table showing the percent living in the same county and the percent living in a different State or abroad. The implied difference between these last two percentages and 100 percent is the share living in the same State but in a different county. The relationships between the two change in residence series is shown below for Alabama. (Implied numbers are in parentheses.)

	Percent			
Type of residence	Born in	Resident in 1975		
Total population State of residence County of residence Other county in State Outside State of residence or abroad Different State or born abroad to American parents.	(100.0) 79.0  (21.0)	(100.0) (90.3) 82.9 (7.4) 9.7		

<sup>&</sup>quot;..." Not available.

Nationally 64 percent of the population in 1980 lived in their State of birth. In the 12th District of Pennsylvania, nearly 90 percent were native to their State, and 20 districts had at least 84 percent native to the State, 10 of these in Pennsylvania (appendix table 7). Low percentages are common in the Congressional districts in high growth areas such as Florida (10 of the 20 lowest), Arizona (3), Nevada (2), California (1), and those in the Maryland and Virginia suburbs of Washington, D.C. (4). Only about 1 in 6 were native to the State in Florida District 14 (West Palm Beach-Fort Lauderdale area).

The percent of foreign born in the United States was only 6.2 in 1980, but 25 Congressional districts had approximately 20 percent or more foreign born. District 18 of Florida (Miami) was the only district with a majority of its population foreign born (52.2 percent). California Districts 24 and 25 in Los Angeles both had 40 percent or more foreign born. Nine of the 20 districts with the highest concentration of foreign born were in New York City (appendix table 3).

#### **RACE AND SPANISH ORIGIN**

Population totals by race and Spanish origin are presented in table 1 for the total population and in a more limited format for the population of voting age (18 and over). The "other specified race" column is limited to data for the racial groups "American Indian, Eskimo, and Aleut" and "Asian and Pacific Islander" where these groups exceed 2 percent of the population. In table 2, median family income and percent of persons with income below the poverty level in 1979 are shown for Black and Spanish origin. Where either of the "other specified race" groups shown in table 1 are larger than Black, however, data for these groups are substituted for Black data in table 2 and footnoted accordingly. Persons of Spanish origin may be of any race.

Nationally in 1980 racial and ethnic groups represented about one fifth of the population. Blacks represented 11.7 percent of the population, persons of Spanish origin 6.4 percent, and Asians and Pacific Islanders only 1.6 percent. These populations are not distributed

uniformly throughout the country; some are highly concentrated in a relatively few locations.

In 1980 Blacks constituted a majority of the population in 15 Congressional districts, all but one of which are located in a large city. District 1 of Illinois. covering the Chicago south side, was 92 percent Black in 1980, and New York District 12 (Brooklyn) and Pennsylvania District 2 (Philadelphia) were about 80 percent Black. The only non-city district with a Black majority was District 2 of Mississippi, the delta area along the Mississippi River. At least 40 percent of the population in 25 Congressional districts was Black in 1980, as shown in table D, and at least 20 percent was Black in 78 districts.

The population of Spanish origin was concentrated primarily in the 4 States adjacent to Mexico in 1980: 15 of the 20 Congressional districts with the highest percentages were in Texas, California, New Mexico, and Arizona. In 9 districts the majority of the population was of Spanish origin, 5 of them in Texas. The highest proportion, 71.7 percent, was in Texas District 15 at the south end of the State. Congressional districts with 40 percent or more of their population of Spanish origin in 1980 are listed in table E.

Only in the 2 Hawaii Congressional districts did Asians and Pacific Islanders predominate in 1980, with District 1 (Honolulu city) having about 65 percent in this group. Just 8 other districts had as much as 10 percent Asian and Pacific Islander (table F). District 3 of New Mexico had the largest proportion American Indian (20.9 percent).

#### **AGE AND SEX**

Limited age detail is shown in table 1: number and percent 18 and over and 65 and over, and median age (the age at which half the population is younger and half older). The voting-age statistics are cross-tabulated by race, Spanish origin, and sex. Number of persons 16 and over are contained in table 3. Much greater age detail can be found in the 1980 census series PHC80-4.

The median age in the United States in 1980 was 30. Congressional districts with median ages well above the U.S.

Table D. Congressional Districts With 40 Percent or More Black Population: 1980

<sup>2</sup>American Indian, Eskimo, and Aleut.

average were heavily concentrated in Florida, with District 13 (Sarasota-Fort Myers area) the oldest at 46.8, closely followed by District 8 (St. Petersburg), 45.2, and District 18 (Miami), 44.3, about 50 percent above the U.S. average (appendix table 4). The 6 Florida districts with the highest median age not coincidentally also had the highest percent of their population 65 and over and the largest number of persons 65 and over, roughly 2 to 2.5 times the 59,000 average elderly population for Congressional districts. Their proportion 65 and over ranged from 27.6 percent to 22.7 percent compared with the national average of 11.3 percent.

Lowest median age was found in Districts 3 and 1 of Utah, with values of 22.4 and 24.2 respectively. As a rule low median age was found in areas with high fertility. Lowest proportions 65 and over commonly appeared in

Congressional districts composed of suburban areas, where the population is heavily concentrated in the young to middle-aged adults and children of school age (appendix table 4).

The population of voting age (18) and over) in 1980 represented about 72 percent of the total population in the United States. The variation in this proportion by Congressional district ranged from a high of about 86 percent in New York Districts 15 and 17 in Manhattan to a low of 60 percent in District 3 of Utah (appendix table 5). There was also little variation in the proportion of women in the voting-age population from the U.S. average of 52.4 percent, ranging from 58 percent (New York District 12) to 46 percent (California District 44). The pattern by race and Spanish origin was very similar to that for the population as a whole.

#### **VOTES CAST FOR CONGRESS**

Votes cast for Congress shown in table 1 have been extracted from the Clerk of the House of Representatives' report, Statistics of the Congressional Elections, November 2, 1982. Some corrections to the numbers contained in the report have been made in Texas where the Clerk's office received late data changes.

The national total votes cast is the sum of votes for the House of Representatives, including the District of Columbia. Six States elected Congressmen at Large (Alaska, Delaware, North Dakota, South Dakota, Vermont, and Wyoming), indicate by an "al" in the table, and the District of Columbia elected a delegate, indicated by "d" in the table. Votes for Senator are shown on the State line for the 34 States which elected Senators; these are indicated by an "s" in the table.

Percent voting has been computed by dividing the number of votes cast by the 1980 census count for the population 18 and over. No estimates of the votingage population are available for Congressional districts for November 1982. Where a candidate was supported by more than one party the percent cast was based on the total vote for that candidate.

Only 39 percent of the total population of voting age actually voted for Congress in the November 1982 election. In only 49 Congressional districts did more than half the population of voting age actually cast a vote. Alaska was highest with about two-thirds voting, followed by 5 Minnesota districts all above 60 percent voting (appendix table 6). Lowest voter turnout was in Kentucky District 1 (12.8 percent). followed by New York Districts 11 and 12 (14.1 percent) and Georgia Districts 4 and 5 (14.8 and 16.9 percent). Voters in the 2 Georgia Congressional districts went to the polls a month after all other elections because of delay in approval of district boundaries by the Federal Government.

Thirteen Congressional candidates received 100 percent of the vote and another 30 received at least 90 percent (appendix table 6). Six Congressional candidates won with less than half the votes cast. In California District 43 a three-way race resulted in a write-in candidate's victory with less than 37

percent of the vote. In District 5 of Arizona, Districts 6 and 8 of Virginia, District 1 of California, and District 11 of North Carolina the winner received slightly less than 50 percent.

#### **EDUCATION**

Table 2 shows the number of persons enrolled in school in 1980 in grades kindergarten through 12 and the proportion of these in private schools. Also shown is the number of persons enrolled in college. Educational attainment is indicated by the percent of persons 25 years and over who completed 8 years or less of school, who completed high school, and who completed at least 4 years of college.

For the more than 47 million children enrolled in kindergarten through grade 12 in the United States only 10.8 percent were enrolled in private school in 1980. However, almost half (48.6 percent) in Pennsylvania District 3 in Philadelphia were enrolled in private school-the largest proportion of any district. All 24 of the Congressional districts with about 25 percent or more of private school enrollment in these grades were in or adjacent to large cities: New York (9 districts), Philadelphia (4), Chicago (3), New Orleans (2), Cleveland (1), Pittsburgh (1), St. Louis (1), Los Angeles (1), Jersey City (1), and Louisville (1) (appendix table 8).

College populations tended to be most concentrated in Congressional districts containing large State universities. The district with the largest numeric concentration of college students, however, was Massachusetts District 8 (95,000 students), in which Harvard, Massachusetts Institute of Technology, Boston University, and Northeastern University are located.

For the population 25 and over nationally, 18.3 percent had only an 8th grade education or less. In Kentucky Congressional District 5 slightly less than half had completed 8 years or less, and Texas District 15 and Kentucky District 7 had over 40 percent completing 8th grade or less. Districts with low educational attainment were concentrated in southern Appalachia, south Texas, and the Mississippi delta area, as well as in portions of large cities (appendix table 8).

Congressional districts with the highest educational attainment for the population

25 and over were generally in the suburban areas surrounding large cities (appendix table 8). Maryland District 8 was highest, with 43 percent of the population completing 4 or more years of college.

#### **FAMILIES**

Sample estimates of the total number of families in 1980 are presented in table 2, together with the percent having children under 18 and the percent with two or more workers in 1979. The percent of family households headed by females with no husband present is a complete-count statistic presented in table 4.

Although nationally slightly more than half of all families had children under 18 in 1980 (51.4 percent), some Congressional districts had a much higher proportion. New York District 18 (Bronx) and Utah District 3 had the highest, with two thirds of their families having children, while 6 districts in central and southern Florida had the lowest proportion, approximately one-third (appendix table 9).

Families with high proportions having 2 or more persons working tended to be found in those Congressional districts located in the suburbs of large cities. Districts 3 and 6 of Minnesota were the highest with about 68 percent, compared with a national average of 54.2. Districts in New York City and Detroit had the smallest proportion with 2 or more workers, with New York District 18 by far the smallest (27.3 percent). New York districts 18 and 11 had both the smallest proportion with 2 or more workers and the highest proportion of family households with female householder (no husband New York District 18 had present). 35 percent female households, almost 3 times the national average of 12.7 percent (appendix table 9).

#### **INCOME AND POVERTY**

Sample estimates on income in 1979 are shown in table 2 either as medians for households and for families (half the households or families having income larger than this amount), or as per capita income (total income divided by total population). Median family

income is included for the Black and Spanish origin populations. Where other races are at least 2 percent of the total population and are larger than the Black population, median income data for these groups are substituted for Black and footnoted accordingly.

Poverty is expressed in terms of the percent of persons with income below the poverty level in 1979 for the total population and for Black and Spanish origin, with the same substitution pattern as for income where other races dominate over Black. Poverty is calculated on the basis of cash only; in-kind benefits such as food stamps, housing assistance, free or reduced-price school lunches, Medicare, and Medicaid are not considered in calculating poverty levels.

Median family income in the United States in 1979 was \$19,908. Of the 12 Congressional districts with the highest median family income all were located in the suburbs of large cities: Washington (3), Detroit (1), Chicago (3), Houston (1), Los Angeles (1), Dallas (1), and New York (2). Highest was the 8th District of Maryland (Montgomery County) \$33,404, followed closely by Michigan District 18 (table G). New York District 15 (Manhattan) had the highest per capita income, \$15,687, more than twice the national per capita of \$7,298 (appendix table 10).

New York District 18 has the lowest median family income, \$8,448, the lowest per capita income, \$3,567, and the highest poverty rate, 43.2 percent. The national rate is 12.4 percent. High incidence of poverty is common in Congressional districts in large cities and in the rural South (table H).

#### LABOR FORCE

Table 3 contains an array of 1980 census sample estimates on the labor force, including the population 16 years old and over, the number and percent in the labor force, and the percent of women in the labor force. The Armed Forces are identified separately, and the unemployment rate for the civilian population is shown.

For the employed population three major "class of worker" categories are shown, and the small difference between the sum of these three percentages and

100 percent is the percent "unpaid family workers." The percent of the employed population in three large industry categories is also shown. Numerous other industry groups and a listing of the employed population by occupation are contained in table 5 of the 1980 census series PHC80-4.

Of the total population 16 years old and over in the United States, 62 percent was in the labor force in 1980 (75 percent of the men 16 and older, but about 50 percent for women 16 and over). The highest labor force participation rate was 75 percent in Texas Congressional District 7, and nearly all the districts with the highest proportions were suburban areas of large cities (appendix table 12). The lowest proportion was found in New York District 18 (46 percent). All districts with less than 50 percent in the labor force were either

poor areas of large cities, rural southern areas, or retirement areas in Florida.

For women, Maryland District 5 led in percent in the labor force in 1980 with 64.6 percent, followed by Virginia District 10; Virginia District 8 tied for 3rd. All three districts are suburban to Washington. Lowest labor force percentages for women were in districts located in the Appalachian part of Kentucky, West Virginia, and Pennsylvania, along with New York District 18 (appendix table 12).

The greatest concentrations of Armed Forces in 1980 were in the vicinity of the Norfolk and San Diego naval bases (Virginia District 2 and California District 44) with 65,000 or more in each (appendix table 14). Four other Congressional districts had 40,000 or more Armed Forces—North Carolina District 7 (Fort Bragg) and 3 (Camp Lejeune), Texas

District 1,1 (Fort Hood), and South Carolina District 1 (Charleston Naval Base and Parris Island). Altogether 50 Congressional districts had about 10,000 or more members of the Armed Forces.

In 1980, when the national percent unemployed was only 6.5 percent. unemployment in Michigan Districts 1 and 13 (Detroit) was 18 and 22 percent respectively. Three other Michigan districts had unemployment rates of about 13 percent or more, as did 2 districts in Chicago, 2 in New York, and 2 in Philadelphia (table I). Lowest unemployment rates (approximately 2.5 percent or lower) were found in Kansas District 1 (western Kansas), Texas Districts 3 and 26 in the Dallas-Fort Worth area, and in Texas Districts 7 and 22 in the Houston area (appendix table 14).

Overall, slightly more than one in six workers was a government worker in 1980 (Federal, State, or local), three out of four were private wage and salary workers, and slightly less than 7 percent were self-employed. The highest proportion in government was in Maryland Congressional District 5 with 38.3 percent, and 6 of the 11 highest districts were located in the Maryland and Virginia suburbs of Washington, in Baltimore, and in Annapolis (appendix table 13). The proportion in Washington, D.C., itself was 40.3 percent.

The proportion of all workers who were private wage and salary workers varied by about 30 points by Congressional district, from a high of 87 percent in Illinois District 5 to a low of 58 percent in Florida District 2. Those districts with low proportions of wage and salary workers generally had high percentages in government (appendix table 13). Self-employment exceeded 15 percent in several districts in the Farm Belt of the Middle West. Highest self-employed percentage was in District 2 of Minnesota (21 percent).

Employment in manufacturing industries was particulary heavy in the Southeast (9 of the highest 13 districts), running from Congressional District 5 of Virginia south through North and South Carolina to Georgia District 9 (table J). North Carolina District 10 had almost half its employment (48 percent) in manufacturing compared with a national average of slightly more than 22 percent.

#### **VETERAN STATUS**

Sample estimates of the number of veterans of military service are shown in table 3. These numbers exclude all persons currently in the Armed Forces, which are shown separately in the table.

The number of veterans per Congressional district averaged 65,386 in 1980, or about one-eighth of the population. The highest number of veterans was 85,411 in Florida District 11. Many of the districts with the largest veteran populations were retirement areas. The smallest veteran populations were in New York Districts 18, 12, and 11 in New York City (appendix table 14).

#### HOUSING UNITS, HOUSEHOLDS

Table 4 focuses on 1980 census of housing information, including total number of housing units, percent vacant, and number of occupied housing units (or households). The percent vacant includes vacant seasonal housing units. Detail shown for occupied housing units includes population per household (population living in households divided by the number of households), percent of family households with female head

and no husband present, percent with more than 1 person per room (a measure of overcrowding), and percent lacking complete plumbing for exclusive use. Also shown is percent owner- and renter-occupied, median value of specified owner-occupied housing units (excluding condominions), and median contract rent for specified renter-occupied units (excluding utilities where paid separately). All these data are based on the complete-count information from the 1980 census.

Sample estimates are presented for year structure built and house heating fuel. For year structure built, percent built in the periods 1970 to 1980 and prior to 1950 is specified. Unspecified but implied is the residual built between 1950 and 1969. For house heating fuel, percent heated by gas (mostly utility gas, but also including bottled, tank, and LP gas) and by fuel oil or kerosene are specified, and the difference between these two and 100 percent is the percent heated by electricity, coal, wood, or other fuel.

In 1980 there were 8 million vacant housing units in the United States, about 9.1 percent of the total housing stock of about 88.4 million. Excluding the 1.7 million seasonally vacant units,

the vacancy rate for the year-round housing was 7.2 percent. Without exception, Congressional districts with the highest vacancy rates were areas with a large stock of seasonal housing. One-third of the housing stock of Michigan District 11 (Upper Peninsula) and 30 percent of New Jersey District 2 (Cape May-Atlantic City), was vacant. Altogether 20 districts had about 20 percent or more of their housing stock in vacant units (table K). Lowest vacancy rates were found in districts in large metropolitan areas, many with rates of 3 percent or less. Lowest was New York District 4 (Long Island), with 1.4 percent (appendix table 15).

Population per household in the United States was 2.75 in 1980, a precipitous decline since 1970 (3.11). Highest population per household in 1980 was found in Utah Congressional District 3 (3.53) and lowest in New York District 15 (1.79). In general, highest population per household is found in districts with high fertility and/or large Black or Spanish origin population. New York Districts 15 and 17 in New York City were the only two districts with populations of less than 2 per households (appendix table 15).

Although nationally only 4.5 percent of occupied housing units was overcrowded (more than 1 person per room) and an even smaller share lacked complete plumbing (2.2 percent) in 1980, more than a quarter of the units in California District 25 (Los Angeles) were overcrowded as were one-fifth of the units in Texas District 15. More than 10 percent of the units in Kentucky Districts 5 and 7 and in Alaska lacked complete plumbing (appendix table 16).

With 64 percent of U.S. occupied housing units being owner-occupied and only 36 percent renter-occupied, owner-occupancy rates ran as high as 86 percent in New York District 4 (Long Island). Many Congressional districts in New York City, however, were heavily renter-occupied, with District 16 leading (96 percent), followed by Districts 18, 17, 15, 11, 12, and 13, all over 75 percent renter-occupied. Other districts with high renter occupancy were in Los Angeles, Chicago, Newark, Jersey City, Boston, and Miami (appendix table 17).

The median value of owner-occupied housing units was \$47,200 in 1980. Eighteen Congressional districts had

Table L. Congressional Districts With a High Median Value of Specified Owner-Occupied Housing Units: 1980

Rank	District	County	Median value (\$1,000)	Rank	District	County	Median value (\$1,000)
1 2 3 4 5 6 7 8 9	N.Y. (15) Hawaii (1) Calif. (12) Calif. (23) Calif. (40) Calif. (42) Calif. (11) Calif. (11) Calif. (21) Calif. (39) Calif. (41) Conn. (4)	Los Angeles San Diego Los Angeles Alameda San Francisco Santa Clara All <sup>1</sup> Orange San Diego Fairfield	112.6 110.9 110.6 108.0 107.0 104.8 102.6 100.3 99.5 98.5

<sup>1</sup>Except Honolulu city and vicinity.

median values in excess of \$100,000, however (table L). New York District 15 (Manhattan) and Hawaii District 1 (Honolulu) were highest, followed by 15 California districts and Hawaii District 2. Lowest median values were in Pennsylvania Districts 2 and 1, less than \$17,000. Other low values were found in large cities and in rural areas (appendix table 16).

With a U.S. median contract rental of just under \$200, highest rental costs occurred in California District 40 (\$365) with ten California districts among the 20 highest (appendix table 17). Lowest rentals occurred in the rural and nonmetropolitan parts of the South. Mississippi District 2 had the lowest contract rent (\$80).

Some 26 percent of the housing units in the 1980 census were reported to have been constructed since 1970, while 37 percent were built in the previous 20 years (1950 to 1970), and another 37 percent built prior to 1950. Numerous Congressional districts established for the 98th Congress are areas heavily built up during the 1970's. In 18 districts, about half or more of the housing units were constructed in the 1970's, with Florida District 14 (Palm Beach/Broward County), Texas District 7 (Harris Co.). and California District 43 (San Diego Co.) built up 60 percent or more since 1970. The rest with more than half the housing units constructed during the 1970's were 5 districts in Florida, 4 in Texas, 3 in Arizona, both Nevada districts, and Alaska (appendix table 18).

Those Congressional districts with a very high share of their housing built prior to 1950 are located in large cities, notably Philadelphia, Chicago, Detroit, New York, Boston, San Francisco, Jersey City, Buffalo, Baltimore, Cleveland, and Newark (appendix table 18). The highest proportion built before 1950 was found in Pennsylvania District 1 (Philadelphia), with 85.6 percent.

Nationally, close to 3 of every 5 housing units in 1980 were heated by gas, nearly 1 in 5 by fuel oil, and nearly 1 in 5 by electricity. The Northeast, however, is predominantly served by fuel oil, particularly the areas near the Atlantic Ocean. In New York District 4 (Long Island) 80 percent of the units are oil-heated.

All 20 of the Congressional districts with the highest usage of fuel oil (over 63 percent) are located in Maine, Connecticut, New York, and Pennsylvania (appendix table 18). Use of fuel oil as a home heating fuel remains heavy along the Atlantic Coastal States south through South Carolina.

#### RELATED REPORTS

The 1980 Census of Population and Housing, PHC80-4, Congressional Districts

of the 98th Congress is the basic source for the data incorporated in this report. Each State report in the PHC80-4 series contains 7 tables of population data and 4 tables of housing unit data from the 1980 census. Table 2 identifies the component counties and places of 10,000 or more in each Congressional district. In addition each report includes Congressional district maps for the districts in the State and a series of appendices covering definitions of terms, area classifications, general enumeration and processing procedures, information on sample design and sampling error, and facsimiles of the census questionnaire.

For the Congressional districts in effect during the preceding decade the Bureau of the Census had issued the Congressional District Data Book—93rd Congress and Congressional District Data supplements for California, New York, and Texas for the 94th Congress. These reports contained 1970 census data together with selected election information for the Congressional districts as then constituted.

A separate source for the maps of Congressional districts is the Congressional District Atlas: Districts of the 98th Congress, which also contains tables identifying the Congressional district(s) in which municipalities and counties fall in each State. A wall map, "Congressional Districts of the 98th Congress of the United States," GE 50, No. 77, shows district boundaries for all States. The map is the basic source of the smaller-scale map in this report, but it also shows county names in addition to county outlines.

Data on elections were derived from the Clerk of the House of Representatives, Statistics of the Congressional Election of November 2, 1982, with corrections to selected statistics on Texas reported by the Clerk's office subsequent to publication of the report. The Clerk's office publishes reports biennially on the results of the Congressional elections, including results of the Presidential elections every fourth year.

<sup>-</sup> Represents zero or rounds to zero.

<sup>1</sup> No husband present.

Ano husband present.

For exclusive use.

Of specified units. For owner-occupied units excludes condominiums.

Data are based on sample; see text.

Includes bottled, tank, and LP gas.

Specified units were less than 50 percent of occupied units.

Specified units were less than 25 percent of occupied units.

Specified units were less than 10 percent of occupied units.

## Appendix.—Congressional District Profiles, 98th Congress—20 Highest (H) or Lowest (L) Observed Values for Specified Topics, 1980 Census

The data which served as the basis for ranking the congressional districts in appendix tables 7 to 14, 18, and selected columns of appendix tables 2 and 3 are estimates based on the 1980 census sample, and thus they are subject to sampling variability. The Congressional Districts that appear in the tables and the order in which they appear are not necessarily those that would result from a complete census of the population for the characteristics represented in the tables.

Topic	Table no.	Detail Detail
Size, growth	1	Total population (H,L); percent change, 1970-80 (H,L); percent deviation from state average population, 1980 (H)
Density, settlement	2	Population per square mile (H,L); percent outside SMSA's (H), percent rural (H); percent rural farm (H)
Race, Spanish, foreign-born	3	Percent Black (H); percent other specified race (H); percent Spanish origin (H); percent foreign born (H)
Age	4	Median age (H,L); number 65 and over (H); percent 65 and over (H,L)
Voting-age	5	Population of voting age: percent female (H); percent Black (H); percent other specified race (H); percent Spanish origin (H); percent of total population (H)
Elections	6	Votes cast for Congress, Nov. 1982: percent of 1980 voting-age population (H,L); percent cast for winning candidate (H,L) $^{\rm 4}$
Migration	7	Percent born in state of residence (H,L); percent living in same state in 1975 (H,L); percent living in same county in 1975 (L) $$
Education	8	Percent enrolled in private schools (H); number enrolled in college (H); percent completing 8 years of school or less (H); percent completing high school (H); percent completing 4 or more years of college (H)
Families	9	Families: percent with own children under 18 (H,L); percent with 2 or more workers in 1979 (H); percent of family households with female head (H)
Income	10	Median household income, 1979 (H); median family income, 1979 (H,L); per capita income in 1979 (H,L)
Poverty	11	Percent of persons with income below the poverty level, 1979: total population (H,L); Black (H); Spanish origin (H)
Labor force	12	Percent in the labor force: persons 16 and over (H,L); women 16 and over (H,L)
Employment	13	Percent private wage and salary workers (H); percent government worker (H); percent self-employed (H); percent in manufacturing (H,L)
Unemployment, Armed Forces, veterans	14	Percent unemployed (H,L); number of Armed Forces (H); number of veterans (H,L)
Vacant housing, per- sons per household		Percent of housing units vacant (H,L); number of persons per household (H,L)
Occupied housing units, owner occupied units	16	Occupied housing units: percent with more than 1 person per room (H); percent lacking complete plumbing (H); percent owner occupied (H); median value of owner occupied units (H,L)
Renter occupied housing units	17	Renter occupied housing units: percent of occupied units (H); median contract rent $(H,L)$
Age of structure, heating fuel	18	Percent year structure built: 1970-80 (H); 1950-69(H); prior to 1950 (H); home heating fuel: percent using gas (H); percent using fuel oil (H)

## 1980 Census of Population and Housing

## **Users' Guide**

The Users' Guide, a reference work on the 1980 census, is now available. It consists of:

- Part A. Text—Covers census data subjects; geographic considerations; reports, tapes, maps, and other products; services available to users; and many other topics central to understanding and using 1980 census data.
- Part B. Glossary—Provides detailed definitions of population, housing, geographic, and technical terms associated with the census—especially important for people using 1980 data on tape or microfiche.
- Sources of Assistance—Furnishes addresses and phone numbers of public and private sector organizations offering a variety of products and services, such as tape processing, area profiles, training, and reference assistance.
- Updates—Provide information on new developments relating to the 1980 census. Each update is keyed to the particular point in "Part A. Text" that needs revision.

Part C, a table finder, and Part D, a guide to tape contents, are planned for publication later.

Order from Superintendent of Documents, Government Printing Office, Washington, D.C. 20402. Specify the stock number (S/N) given below and make checks payable to Superintendent of Documents.

Part A. Text (S/N 003-024-03625-8)-\$5.50. Supplement 1 (S/N 003-024-05004-8)-\$6.00 (includes Part B. Glossary, Sources of Assistance, and Updates)
